### **RMerge – CPCS Enhancement**

Charlotte, N.C., January 11, 2002---- Software Corporation International (SCI) announced today the release of SCI's RMerge software application. RMerge provides users of IBM's CPCS the opportunity to increase the power and flexibility of their current operations.

RMerge was designed to allow users of IBM's High Speed Reject Repair (HSRR) system the ability to establish separate merge profiles for repetitive merge passes. Utilizing this electronic multi-merge capability, users can dramatically increase their merge acceptance rate. "RMerge is an excellent example of SCI's software development focus," said D. Keith Sides, Vice President. "SCI is committed to providing niche based applications and utilities that deliver real value and provide accelerated return on investment."

RMerge was beta tested at multiple locations of a major financial institution and is available for immediate delivery. For addition information on this or other SCI solutions, please contact SCI's Software Development Group at (800) 772-7044.

SCI is one of the world's largest independent providers of CPCS and HPTS technical support. Since 1990 the company has been providing professional services and technical solutions to clients in the financial services marketplace.
