SnapShot

Overview

SnapShot is a browser based software offering that was designed to work with both IBM's CPCS and *imageCPCS* applications. SnapShot facilitates the collection, prioritization, and display of real-time item processing information and images. SnapShot provides users with the ability to quickly obtain the current status of any processing site, including sorter detail, pocket summary information, individual item information, and associated images.

Software Description

SnapShot provides users with the ability to collect and display real-time item processing information and images. All or selected MICR information and images can be displayed, filtered, and highlighted based on user supplied criteria. These criteria can be quickly set up or modified using the SnapShot Options feature. Default display options can be established for each capture site and stored for future inquiries. The system was also designed to allow for ad hoc inquiry and collection of data. SnapShot allows users to monitor up-to-the minute processing information across multiple processing sites.

Platform

SnapShot was built using Microsoft's .Net platform, and it utilizes XML Web service standards, which enables both new and existing applications to connect with software and services across platforms, applications, and programming languages. The .Net framework allows users to lower their IT costs by empowering developers to quickly and easily create solutions building on their existing skill sets.

Profiles

SnapShot utilizes SCI's interLink Profile Management System to build unique profiles for each capture site, identifying the specific information to retrieve for a particular site. SCI currently has an extensive library of Application Programming Interfaces (APIs) available to facilitate rapid development.

Benefits

SnapShot is a powerful, browser-based solution that provides users of IBM's CPCS and *imageCPCS* systems with real-time, mission critical item processing information and images to maximize their operations and investments.

SCI

SCI was founded in 1990 by a group of individuals with extensive experience in the payment systems and professional services industries. During the last decade, the company has grown to be one of the world's largest and most capable independent providers of CPCS technical support. More recently, SCI has participated in the development of IBM's *imageCPCS* system. SCI consultants are some of the most talented and experienced professionals in the marketplace. They possess the understanding and insight necessary for quickly solving our client's most complex challenges.

Today, while SCI remains focused on its initial market, the company has significantly increased its professional services and solutions offerings. SCI's software development group was formed to leverage the company's knowledge and expertise to deliver a suite of niche based applications all designed to increase the power and flexibility of IBM's CPCS.

SnapShot is an excellent example of SCI's focus in software development. The company's goal is to provide tools, utilities, and applications that all deliver real value and provide immediate benefits.

For more information about SnapShot or other SCI solutions, please contact the company's software development group at 800-772-7044.
