SnapShot

Powerful item processing solution for IBM CPCS and *image*CPCS users

Charlotte, N.C., April 21, 2003---- Software Corporation International (SCI) announced today the release of SCI's SnapShot data collection solution. SnapShot is a powerful browser-based application that was designed and built to facilitate the collection, prioritization, and display of real-time item processing information and images.

SnapShot provides users with the ability to collect and display mission critical, real-time item processing information and images. "SnapShot was built using Microsoft's .Net platform, and it utilizes XML Web service standards, which enables both new and existing applications to connect with services across multiple platforms, applications, and programming languages," said D. Keith Sides, Group Vice President. SnapShot utilizes SCI's interLink Profile Management System to build unique profiles for each capture site, identifying the specific information to retrieve for a particular site. Extensive Application Program Interfaces (APIs) are currently available to facilitate rapid development.

SnapShot works with both IBM's CPCS and *image*CPCS applications and is available for immediate delivery. SCI will be demonstrating SnapShot, along with their other solutions, in New Orleans May 5th through 9th at this year's BAI TransPay 2003 Conference. For addition information on SnapShot or other SCI solutions, please contact SCI's Software Development Group at 1-800-772-7044.

SCI is one of the world's largest independent providers of CPCS and *image*CPCS expertise. Since 1990, the company has been providing professional services and technical solutions to clients in the financial services marketplace. SCI is committed to providing niche based solutions and utilities that deliver real value and provide immediate benefits.
